

Hash Verification Record; Lab 2 USB Acquisition

Case/Lab ID: CIP-B102-Lab4-2026-0829 Examiner: Abubakari-Sadique Hamidu (Reg: 2025/FWSD/11392) Date: 29 August 2026

Evidence Details

Field	Value
USB brand/description	Samsung USB flash drive (FAT32/FDisk partition scheme)
USB capacity	15.7 GB (15,728,640,000 bytes)
Acquisition tool	BSD <code>dd (/bin/dd)</code> , macOS 13.7.4 (Build 22H420)
Image filename	CIPB102_Lab4_Abubakari-Sadique_Hamidu_USB.dd
Bytes transferred	15,728,640,000 (exact match to source device size)
Errors during acquisition	None

Hash Comparison

Target	MD5	SHA-256
Source USB (<code>/dev/rdisk2</code>)	6499112e980b371ae50ea6ff59c9a866	b7a7f78b784c854d1e4a10393e43d70a230a817adf51ba74eeb2ada43551ca43
Acquired image (.dd file)	6499112e980b371ae50ea6ff59c9a866	b7a7f78b784c854d1e4a10393e43d70a230a817adf51ba74eeb2ada43551ca43

Result: CONFIRMED MATCH — both MD5 and SHA-256 digests are identical between the source device and the acquired image. This provides cryptographic proof that the acquisition is a complete, unaltered, bit-for-bit copy of the source USB.

Image Validation

The acquired .dd image was mounted read-only (`hdiutil attach -readonly -imagekey diskimage-class=CRawDiskImage`) and the following evidence files were confirmed present with sizes matching the originals exactly:

File	Size
CIP-B102-Lab4-Evidence/Abubakari-Sadique_Hamidu.txt	462 bytes
CIP-B102-Lab4-Evidence/Research_Process_Flowchart.png	21,488 bytes
CIP-B102-Lab4-Evidence/timetable.pdf	147,022 bytes
